

The Process

How We Do Business

Page 1 of 1

Whether your project is concrete or conceptual, Imaging Sciences can help you transform your ideas into feasible/obtainable applications. Please contact our design team to discuss details.

1. Gather information – anything and everything pertaining to your specific project (relevant).
2. Obtain a Quotation - When a “take off” and “make up” are known, Imaging sciences can assist your company in finding cost effective solutions to suit the needs of the space, and help budget your project.
3. Obtain a sample – If requested, custom samples or mock-up’s can be fabricated. Please read our “Sample Policy” for more information.

Note: Imaging Sciences will assign a product specification number which references detailed/technical information needed by production to re-create/re-fabricate the product. This will be printed on a sticker that is applied to both the glass sample and a brochure (sent together). Please keep track of this spec number - it tells us everything we need to know.

4. Accept or reject sample. If rejected, please let us know how we can tailor your next sample (color/pattern) to your desired specifications.
5. Place an Order. Please read our Terms and Conditions, sign, and your product will be produced.

And again, the best way to get started is to call.
